

SAFEAXIS™ Access Control Software

Description

SAFEAXIS is a single workstation, access control & alarm monitoring system, designed to efficiently and economically meet the security needs of most businesses. Providing fast and easy installation, this feature-rich application allows you to manage, monitor and control all of the information and processes needed to effectively secure your facility.

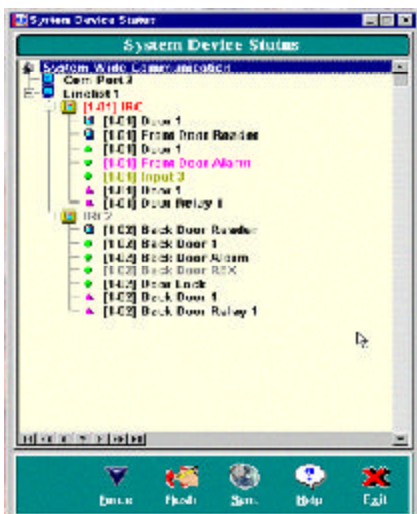

Combining this comprehensive software package with SAFEAXIS Intelligent Modules provides a powerful, integrated solution that offers maximum security, unsurpassed flexibility, simple operation and optimal value.

SAFEAXIS presents information using graphic menus, real-time displays and dynamic interactive screens. Point and click operation, hierarchical tree views and color-coded information. Operators can quickly identify critical conditions and perform required system functions.

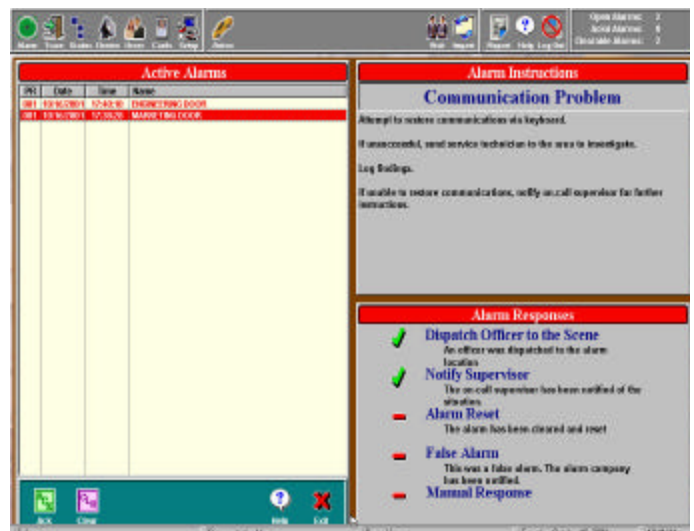

SAFEAXIS offers cardholder management, facility access assignment, alarm & event monitoring, activity tracking, time code operation, and device control.

Features

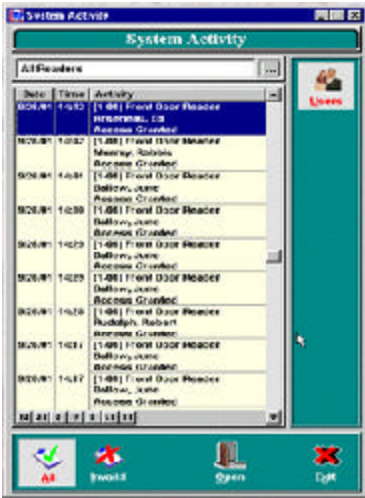

- Auto-recognition and auto-configuration of Intelligent Reader Controllers (IRC-2, 4)
- Default data entry of all system devices
- Visual display of system device configuration using standard hierarchal tree
- Real-time display of all monitored system devices
- Customizable alarm annunciation, instructions and responses per alarm point
- Supports multiple reader types and technologies including Wiegand card and pin, or proximity
- Multiple time line control of system devices
- Independent activation and expiration of each assigned access level
- Extended unlock time assigned per ID card
- Real-time cardholder tracking, including cardholder "highlight" and "stealth" features
- Keyboard control of individual or groups of devices

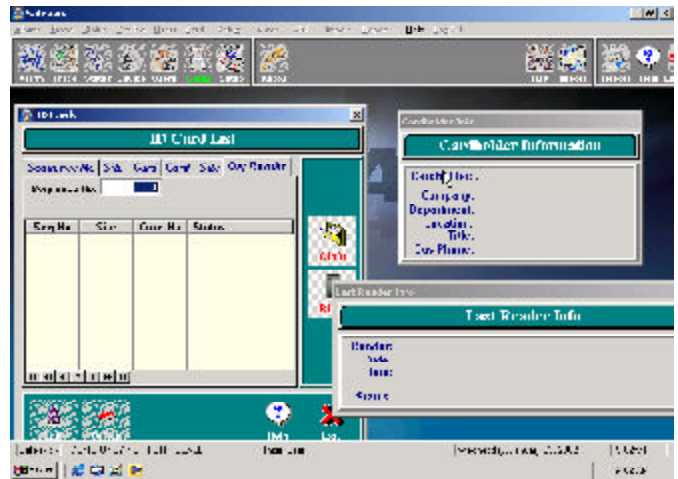

View "real-time" status of monitored devices (comm lines, modules, & inputs)

"Real-time" events are automatically displayed as they occur. Custom instructions and alarm response checklist are simultaneously viewed on the split screen.

View "real-time" access requests at user-defined readers, track specific cardholders and open a door from a single SAFEAXIS window.

With a single mouse click, view all cardholders, company information, and last reader access information.

Organize and manage cardholder information. Create user-defined folders to maintain information relevant to your specific needs.

Architects and Engineers Specifications

The Contractor shall furnish and install a single workstation, standalone access control and alarm monitoring system having the capacity to monitor and control up to 10 doors and support up to 3,500 cardholders. The system shall be Safeaxis, as manufactured by Wheelock Inc. or approved equal. Those wishing to qualify as an equal shall submit information for consideration ten days prior to the date of bid to permit an addendum, listing the approved alternative equipment as an equal to that specified.

The operating system shall utilize Safeaxis software for all administrative and management activity. The software shall enable the operator and system administrator to view graphic menus, real time displays and dynamic interactive screens. Provide point and click operation, hierarchical tree views, and color coding information to enable operators to identify critical conditions and perform required system functions. The specified software shall support and be inclusive of the following features:

Auto recognition and auto configuration of Intelligent Reader Controllers. The software shall support visual displays of system device configuration using a hierarchical tree format and real time display of all alarm monitoring points. The software shall permit tear-away display and immediate reporting of alarm conditions, customizable alarm annunciation, instructions and responses per alarm point. The software shall support independent activation and expiration of each assigned access level, extended unlock time assigned per ID card, real time cardholder tracking and stealth mode operation.
